PROGRAM OBJECTIVES

Upon successful completion of this program, a student will be able to:

1. Recognize structure-function relationship in biological systems including membranes, nucleic acids, proteins, cells and organelles.
2. Relate the principles of cellular energetics.
3. Describe how mutation leads to evolution and species diversity.
4. Distinguish the processes involved in duplication, expression and inheritance of genetic material.
5. Compare and contrast major biological characteristics of prokaryotic and eukaryotic cells including: cell structures, replication, inheritance/recombination, expression and regulation of gene expression, and relate methods of microbial control, including physical, chemical and chemotherapeutic.
6. Evaluate, interpret and discuss scientific journal articles.
7. Plan, design and execute an experiment following the tenets of the scientific method.
8. Communicate effectively in both written and oral formats.
9. Demonstrate proficiency in the lab with the following: microscopy, basic analysis of DNA and proteins, field and environmental techniques, and lab safety.
10. Characterize the roles of humans in and on the environment.
